**VTech Offers Increased Capabilities with New Deskset SIP Phones for Businesses**

*Additions to VTech ErisTerminal Business Phone Family Provide Flexibility, Greater Cordless Freedom for Today's Workforce*

**BEAVERTON, Ore.**, June 14, 2016 — VTech today introduced new deskset products to its ErisTerminal® business phones portfolio to meet demands across a spectrum of workplaces, from factories to offices and retail environments. Now, business professionals have more options of affordable, high-quality communications technology to fit their individual needs. The company introduced the new VSP726 and VSP736 desksets, which boast advanced session initiation protocol (SIP) features, and the VSP608 Accessory DECT Cordless Deskset, designed for companies that need a deskset when Ethernet access is unavailable.

VTech's award-winning ErisTerminal family is designed to give businesses solutions that fit their size and needs. The easy-to-install VSP726 and VSP736 desksets feature power over Ethernet support, dual Ethernet ports and auto-provisioning. The VSP726 provides support for up to four SIP lines/accounts, while the VSP736 allows users to manage up to six SIP lines/accounts. The devices make calling more efficient, with 16 programmable keys on the VSP736 and 12 on the VSP726. Both desksets have a micro SD card port, which allows users to record and save calls directly to their deskset for easy playback without the need for subscription services or extra fees.

For companies that need the ability to take phone calls throughout an office or warehouse, the VSP726 and VSP736 desksets have built-in DECT 6.0, which enables pairing to any compatible device. This allows users to easily add accessories like the VTech VSP505 DECT Cordless Headset and VSP601 DECT Handset with greater ease, for more mobility and the same high call clarity.

When a phone is necessary in a location without an Ethernet connection, the VSP608 Accessory DECT Cordless Deskset is ideal, as the phone needs only a power outlet to operate. Businesses can add up to six cordless handsets or desksets, each with its own extension and unique phone number, when paired with the already available VSP600 SIP base station. The VSP608 sets up in minutes, with no complicated wiring or cabling requirements. Simply plug in the deskset to a power outlet, wirelessly connect it to the VSP600 base, and it is ready for use. The VSP608 can even temporarily be used in areas with no power outlet nearby, as its battery supports seven-hour talk time.

"As we grow the ErisTerminal portfolio, we've worked to provide devices that give businesses the flexibility and customization they need, whether they're in an office or an auto shop," said Graham Williams, vice president, Business Phones Division, VTech Communications. "These new products will help IT managers and business owners find a phone system that helps them move their companies forward."

**Feature-Rich Advances Allow Greater Flexibility**

Since its introduction, the VTech ErisTerminal family has enabled businesses to be more productive and efficient. From internal discussions to important customer conversations, VTech solutions transform routine business calls into opportunities to improve communication.

Today's announcement brings multiple enhancements to the ErisTerminal line. Both the VSP726 and VSP736 include additional SIP features like an XML browser, mutual authentication, Action URI, increased customization with programmable hard keys and the ability to upload custom ringtones. Both models feature dual GigE network ports to reduce network complexity while maintaining high network bandwidth.

All ErisTerminal SIP phones come with an industry-leading, standard three-year warranty that provides advanced replacement on warranty claims using new, not refurbished, products.

VTech's ErisTerminal portfolio has a product for every customer need. Complete with essential features, such as power over Ethernet, HD audio, multi-line support and scalability, VTech products let business owners rest assured that their employees will never miss a beat. Installation is a breeze, and users can manage multiple calls with advanced call-handling features and support multiple SIP lines.

The company's ErisTerminal family now allows even greater cordless freedom with the ability to pair the VSP601 handset to the new VSP726 and VSP736 desksets, in addition to the VSP600 base.
